

# Extreme-Broadband Silicon Capacitor XBSC 0201M 22nF BV11

Rev. 2.06

## General description

XBSC Capacitor targets Optical communication system such as ROSA/TOSA, SONET and all optoelectronics as well as High speed data system or products. The XBSC is suitable for DC blocking, feedback, coupling and bypassing applications in all broadband optoelectronics and High-speed data system. The unique technology of integrated passive device in silicon, developed by Murata Integrated Passive Solutions, offers unique performances with low insertion loss, low reflection and phase stability from 73 KHz to 150 GHz+.

These capacitors in ultra-deep trenches in silicon have been developed in a semiconductor process, in order to integrate trench MOS capacitor providing high capacitance value of 22 nF (for kHz–MHz range) and high frequency MIM capacitors for low capacitance value for GHz range), combined in a 0201M [0.6x0.3mm] case.

The XBSC capacitor provides very high stability of the capacitance over temperature, voltage variation as well as a very high reliability.

XBSC capacitors have an extended operating temperature ranging from -55 to 150°C, with very low capacitance change over temperature.

**Assembly:** Suitable for surface mounted application on rigid PCB, ceramic substrate, FR4 (laminated) or flex platforms.

**Bump finishing:** SAC305 type 6.

Copper pads optional for embedding version and ENIG for un-bumped version, as an optional finishing.

## Key features

- Ultra-Broadband performance up to 150 GHz
- Resonance free
- Phase stability
- Insertion loss < 0.6dB Typ. up to 150 GHz
- Ultra-high stability of capacitance value:
  - Temperature 70ppm/K (-55 °C to +150 °C)
  - Voltage <-0.1%/Volt
  - Negligible capacitance loss through ageing
- Low profile: 140 μm including bump height (SAC305 40μm bumps after reflow)
- Break down voltage: 11V
- Low leakage current < 100pA
- High reliability
- High operating temperature (up to 150 °C)
- Compatible with high temperature cycling during manufacturing operations (exceeding 300 °C)
- Compatible with EIA 01005 footprint and with EIA 0201 outline
- SAC305 40μm bumps after reflow

## Key applications

- ROSA/TOSA
- SONET
- High speed digital logic
- Microwave/millimetre system
- High volumetric efficiency (i.e. capacitance per unit volume)
- Broadband test equipment

## Pad Metallization

This surface mounted Silicon Capacitor is delivered as standard with SAC305 type 6 bumping (Refer to Figure7).

Other Metallization, such as ENIG (0.1µm Au / 5µm Ni) (Refer to Figure8), Copper, Thick Gold or Aluminum pads are possible on request.

Silicon dies are not sensitive to humidity, please refer to applications notes 'Assembly Notes' section 'Handling precautions and storage'.

## Material regulation

This product is RoHS compliant at the time of publication. For further information about regulation compliancy, please ask your sales representative.

## Package outline

The product is delivered as a bare silicon die, with passivation opening for contacts.

## Assembly

---

XBSC series is compatible with standard reflow technology.

It is recommended to design mirror pads on the PCB.

For further information, please see our mounting application note.

The attachment techniques recommended by Murata on the customer's substrates are fully detailed in specific documents available on our website. To assure the correct use and proper functioning of Murata capacitors **please download the assembly instructions on <https://www.murata.com/en-us/products/capacitor/siliconcapacitors> and read them carefully.**

## Definitions

### Data sheet status

Objective specification: This data sheet contains target or goal specifications for product development.

Preliminary specification: This data sheet contains preliminary data; supplementary data may be published later.

Product specification: This data sheet contains final product specifications.

### Limiting values

Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those given in the Electrical performances sections of this specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

### Application information

Where application information is given, it is advisory and does not form part of the specification.
