## About This Document

Type 2EC is a small and high-performance module based on IFX CYW55571 combo chipset, supporting IEEE 802.11a/b/g/n/ac/ax SISO + Bluetooth 5.3 BR/EDR/LE. This datasheet describes Type 2EC module in detail.

Please be aware that an important notice concerning availability, standard warranty and use in critical applications of Murata products and disclaimers thereto appears at the end of this specification sheet.

## Audience & Purpose

Intended audience includes any customer looking to integrate this module into their product; specifically RF, hardware, software, and systems engineers.

## Document Conventions

**Table 1** describes the document conventions.

**Table 1: Document Conventions**

## 1 Scope

This specification characterizes the IEEE 802.11a/b/g/n/ac/ax SISO + Bluetooth 5.3 BR/EDR/LE combo module.

## 2 Key Feature

- ◆ Infineon CYW55571 inside
- ◆ Supports IEEE 802.11a/b/g/n/ac/ax: Tri band 2.4 GHz, 5 GHz, and 6 GHz
- ◆ 20 MHz, 40 MHz and 80 MHz channels
- ◆ Up to MCS11 data rates (600Mbps)
- ◆ Supports Bluetooth specification version 5.3
- ◆ For supported Bluetooth functions, refer to [Bluetooth SIG site](#) 
- ◆ WLAN interface: PCIe 3.0 Gen2, SDIO 3.0/2.0
- ◆ Bluetooth interface: HCI UART, PCM and I2S
- ◆ Temperature Range: -40 °C to 85 °C
- ◆ Dimensions 12.5 x 9.4 x 1.2 mm
- ◆ Weight: 340 mg
- ◆ MSL: 3
- ◆ Surface-mount type
- ◆ RoHS compliant
- ◆ Total FIT: 186

## 3 Ordering Information

The ordering information are shown in **Table 2**.

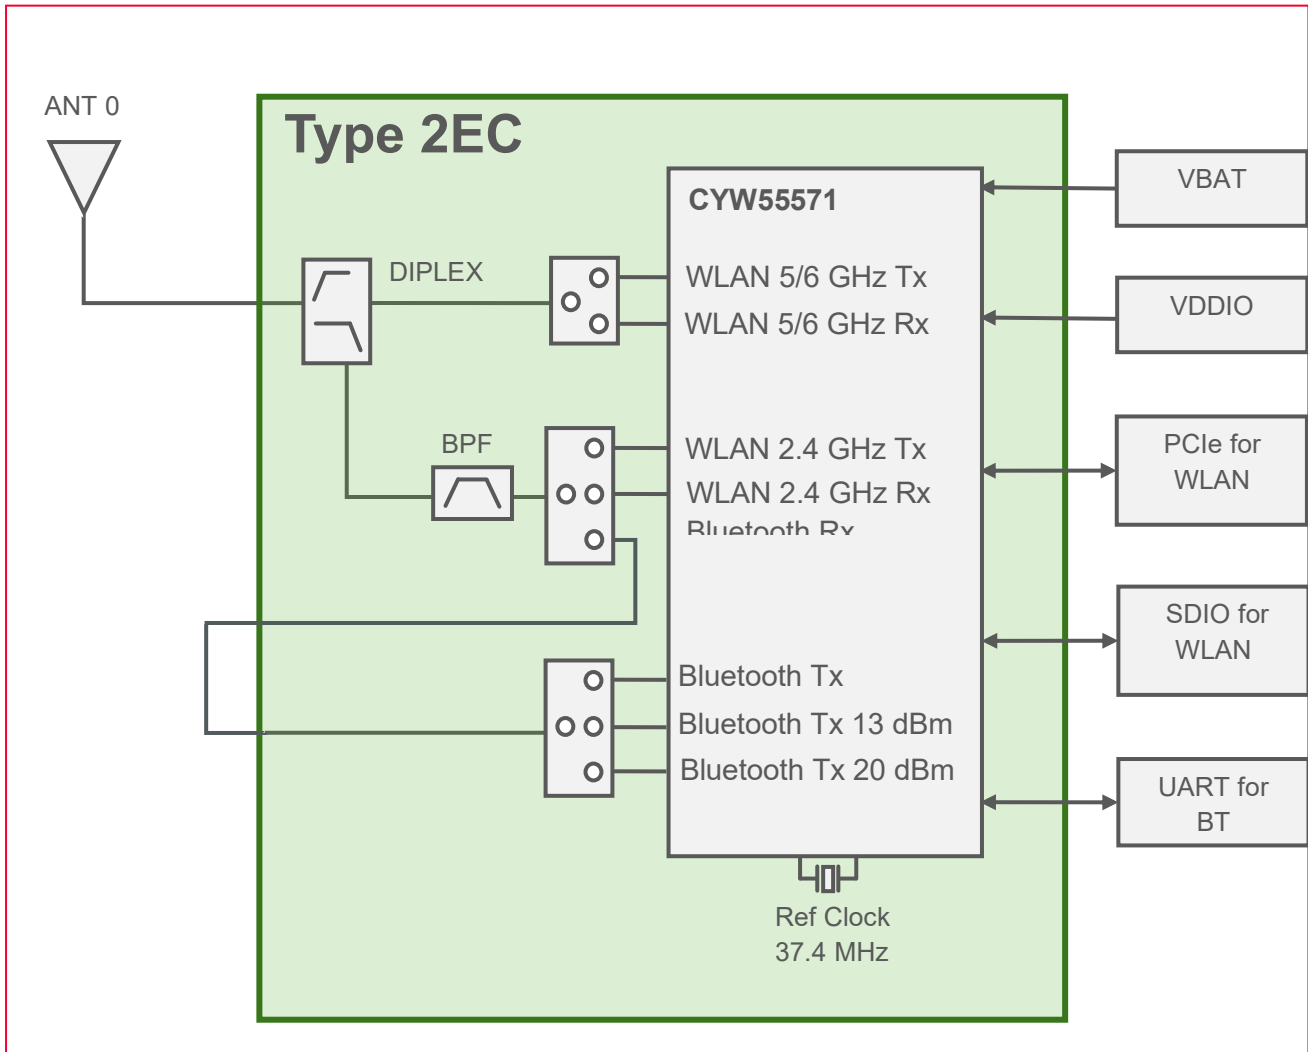

**Table 2: Ordering Information**

Ordering Part Number	Description
LBEE5XV2EC-001	Module Order
LBEE5XV2EC-SMP	Sample module order (If module samples are not available through distribution, contact Murata referencing this part number).

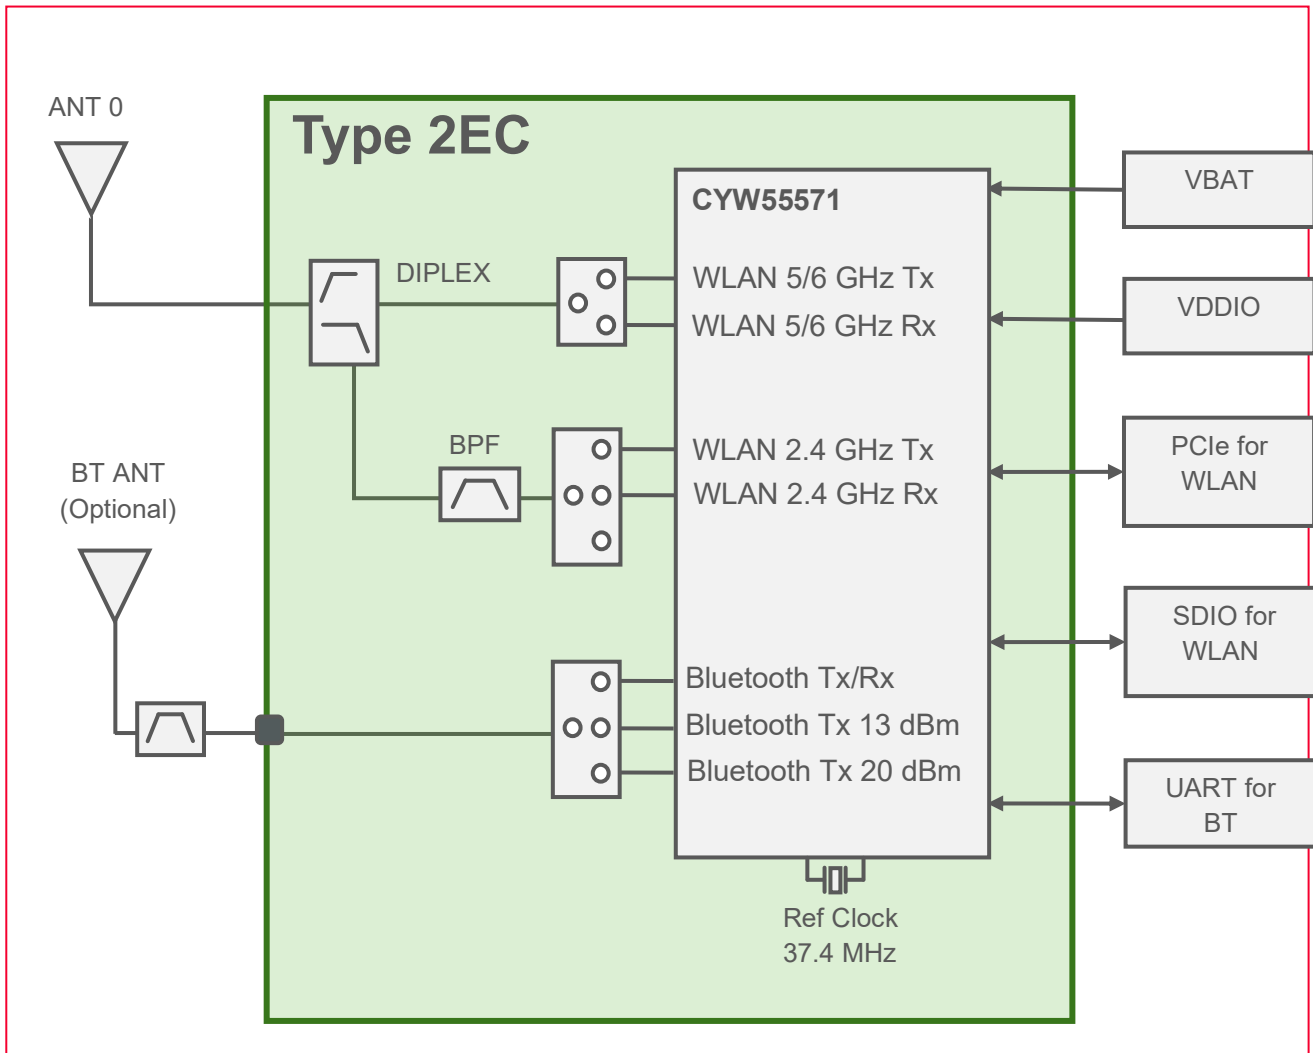

## 4 Block Diagram

## 5 Certification Information

This section has information about radio and Bluetooth certification.

### 5.1 Radio Certification

**Table 3:** Radio Certification shows the radio certification information.

**Table 3: Radio Certification**

Country	ID	Country Code
USA (FCC)	VPYLBEE5XV2EA	US
Canada (ISED)	772C-LBEE5XV2EA	CA
Europe	EN300328/301893, EN300440, Draft EN 303687 The conducted test reports are prepared.	DE
Japan (MIC)	Japanese type certification is prepared.  003-240247	JP

Each country code is defined by Murata's clm\_blob file. Please ask your contact person from Murata.

### 5.2 Radio Regulatory Certification by Country

Murata have prepared the document about Radio Regulatory Certification separately.

This document is designed to ensure that module manufacturers correctly communicate the necessary information to host manufacturers that incorporate their modules.

Refer to **【Regulatory Information】** : [Type 2EC Radio Law Approval Application Note !\[\]\(0df0bdc1e09cbc2587d9dd4511cb0c27\_img.jpg\)](#) for Radio Law Certification user manual.

If you don't follow the rule written in Type 2EC Radio Law Approval Application Note, there is a risk of conflict Radio Law Certification.  
Please be sure to check the document.

### 5.3 Bluetooth Qualification

- QDID: 200016
- For supported Bluetooth functions, refer to [Bluetooth SIG site !\[\]\(44c04e938891cea320e5bd879db35568\_img.jpg\)](#).

## 6 Dimensions, Markings, and Terminal Configurations

This section has information on dimensions, marking, and terminal configurations for Type 2EC as shown in **Figure 3**.

**Figure 3: Dimensions, Markings and Terminal Configurations (Unit: Millimeters)**

**Table 4** describes the markings shown in **Figure 3**.

**Table 4: Markings**

Marking	Meaning

**Figure 4:** Structure shows the Type 2EC structure.

**Figure 4: Structure**

The sides of the module are GND shielded. In order to avoid contact between the GND shield and the electrodes on the mother board, please carefully evaluate the standoff before use the module.

## 7 Module Pin Descriptions

This section has the pin descriptions of Type 2EC and pin assignments layout descriptions.

### 7.1 Module Pin Layout (Top View)

The pin assignment (top view) layout is shown in **Figure 5**.

## 7.2 Pin Descriptions

The following notations shown under Type indicate pin directions, and characteristics, if any.

- **I/O**: Bidirectional
- **I**: Input
- **O**: Output
- **PWR**: Power
- **GND**: Ground
- **OD**: Open-Drain
- **RF**: RF terminal

**Table 7** describes Type 2EC pins.

**Table 7: Pin Descriptions**

No.	Pin name	Type	Connection to IC Pin Name	Description
1	PCIE_PERST_L	I	PCIE_PERST_L	PCIe System Reset. This input is the PCIe reset as defined in the PCIe base specification v1.1.
2	PCIE_CLKREQ_L	OD	PCIE_CLKREQ_L	PCIe clock request signal which indicates when the REFCLK to the PCIe interface can be gated. <ul style="list-style-type: none"> <li>• <b>1</b> = the clock can be gated.</li> <li>• <b>0</b> = the clock is required.</li> </ul>
3	PCIE_PME_L	OD	PCI_PME_L	PCI power management event output. Used to request a change in the device or system power state. The assertion and de-assertion of this signal is asynchronous to the PCIe reference clock. This signal has an open-drain output structure, as per the PCI Bus Local Bus Specification, revision 2.3.

## 8 Absolute Maximum Ratings

The absolute maximum ratings are shown in **Table 8**.

**Table 8: Absolute Maximum Ratings**

Parameter		Minimum	Maximum	Unit
Storage Temperature		-40	+85	°C
Supply Voltage	VBAT	-0.5	6.0	V
	VDDIO	-0.5	2.2	V

Stresses in excess of the absolute ratings may cause permanent damage. Functional operation is not implied under these conditions. Exposure to absolute ratings for extended periods of time may adversely affect reliability. No damage assuming only one parameter is set at limit at a time with all other parameters is set within operating condition.

## 9 Operating Condition

The operating conditions are shown in **Table 9**.

**Table 9: Operating Conditions**

Parameter		Minimum	Typical	Maximum	Unit
Operating Temperature		-40	+25	+85	°C
Operating Voltage	VBAT	3.0	3.3	4.8	V
	VDDIO	1.71	1.8	1.89	V
Peak Current	VBAT=3.3V	-	-	1000	mA

Minimum voltage of VBAT is sensitive to get RF performance, so please keep minimum. Voltages level at the input of these module terminals, otherwise RF performance significantly goes worse.

## 10 External LPO\_IN Signal Requirement

External LPO requirements are shown in **Table 10**.

**Table 10: External LPO\_IN Signal Requirement**

Parameter	External LPO_IN Clock	Unit
Nominal input frequency	32.768	kHz
Frequency accuracy	±250	ppm
Duty cycle	30 - 70	%
Input signal amplitude	200-1800	mV, p-p
Signal type	Square-wave or sinewave	
Input impedance <sup>1</sup>	> 100k	Ω
	< 5	pF
Clock jitter (during initial start-up)	< 10,000	ppm

<sup>1</sup> When power is applied or switch off.

## 11 Strapping Options

The pins listed in Table below are sampled at power-on reset (POR) to determine the various operating modes. Sampling occurs a few milliseconds after an internal POR or de-assertion of the external POR. After the POR, each pin assumes the GPIO, or alternative function specified in the signal descriptions table. Each strapping option pin has an internal pull-up (PU) or pull-down (PD) resistor that determines the default mode. To change the mode, connect an external PU resistor to VDDIO or a PD resistor to GND, using a 10 kΩ resistor or less.

**Table 11** shows the strapping options.

**Table 11: Strapping Options**

Pin Name	Default Pull During Strapping	
GPIO_1	1	1 = PCIE 0 = SDIO
GPIO_12	1	1 = Bluetooth over UART 0 = Reserved

## 12 I/O State

The following notations are used in I/O State Table.

- **I**: Input signal
- **O**: Output signal
- **I/O**: Input/Output signal
- **PU** = Pulled up
- **PD** = Pulled down
- **NoPull** = Neither pulled up nor pulled down

Where applicable, the default value is shown in brackets (for example, [default value]).

**Table 12** describes the I/O state table.

## 13 Power-On Sequence

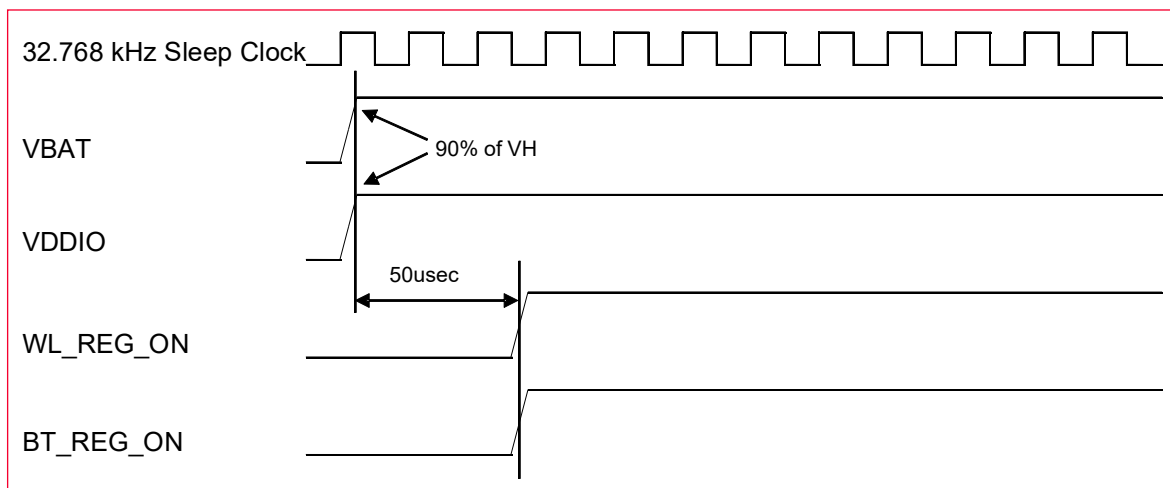

This section describes the power sequences along with their parameters.

- VBAT and VDDIO should not rise 10%-90% faster than 40 microseconds.
- VBAT should be up before or at the same time as VDDIO. VDDIO should NOT be present fast or be held high before VBAT is high.
- WLREG\_ON and BTREG\_ON should be up after sleep clock oscillation is stabilized.
- Please proceed reset by WLREG\_ON and BTREG\_ON until it starts normally if it doesn't wake from sleep property, or it is presented with uncertain status.
- CYW55571 has an internal power-on reset (POR) circuit. The device will be held in reset for a maximum of 110 ms after internal regulators and VDDIO have both passed the POR threshold. Wait at least 51.5 ms after internal regulators and VDDIO are available before initiating PCIe accesses.

## 14 Digital I/O Requirement

The requirements are described in Table 13.

Table 13: Digital I/O Requirements

Digital I/O Pins	System	Minimum	Typical	Maximum	Unit
PCIe Out-of-Band Signals (PCIE_PERST_L, PCIE_PME_L, and PCIE_CLKREQ_L) For VDDIO = 1.8 V:					
Input high voltage	VIH	0.65×VDDIO	-	-	V
Input low voltage	VIL	-	-	0.35×VDDIO	V
Output high voltage@2mA	VOH	VDDIO-0.4	-	-	V
Output low voltage@2mA	VOL	-	-	0.45	V

VOH specification is not applicable for PCIE\_PME\_L and PCIE\_CLKREQ\_L signals as they are open-drain outputs.

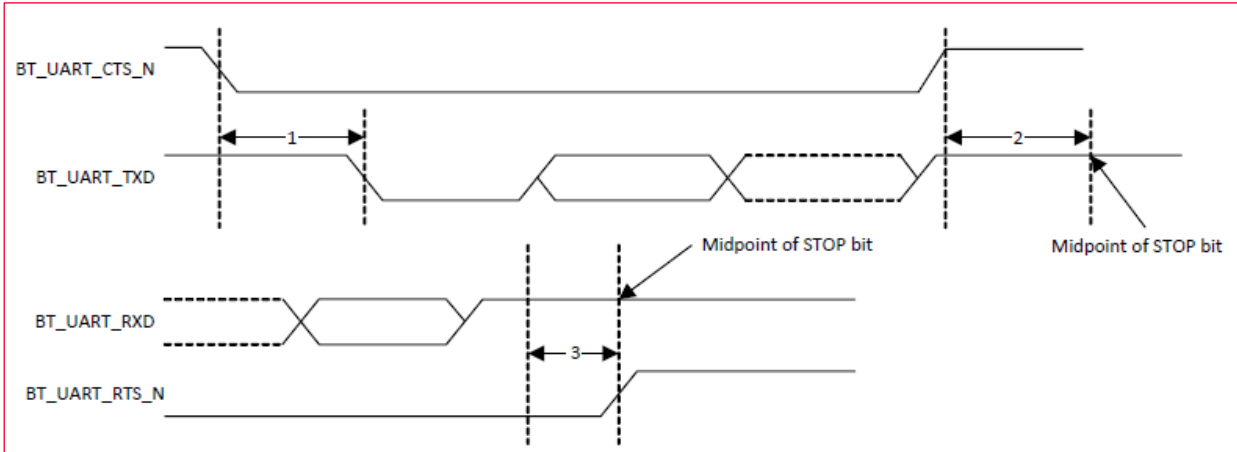

## 15 Interface Timing and AC Characteristics

This section describes the Bluetooth UART timing and Bluetooth PCM interface timing data formatting and wideband speech support (at different modes) and their parameters.

### 15.1 Bluetooth UART Timing

Figure 10 shows the Bluetooth UART timing signals.

**Figure 10: Bluetooth UART Timing Signal**

**Table 14** shows the Bluetooth UART timing signal parameters.

**Table 14: Bluetooth UART Timing Signal Parameters**

Reference	Description	Minimum	Typical	Maximum	Unit
1	Delay time, BT_UART_CTS_N low to BT_UART_TXD valid.			1.5	Bit periods
2	Setup time, BT_UART_CTS_N high before midpoint of stop bit.			0.5	Bit periods
3	Delay time, midpoint of stop bit to BT_UART_RTS_N high.			0.5	Bit periods

## 15.2 Bluetooth PCM Interface Timing

This section describes the Bluetooth PCM Interface Timing and its data formatting and widespread speed support that includes short frame sync and long frame sync at master and slave modes.

### 15.2.1 Data Formatting

The IC used in the module may be configured to generate and accept several different data formats. For conventional narrowband speech mode, the IC uses 13 of the 16 bits in each PCM frame. The location and order of these 13 bits can be configured to support various data formats on PCM interface. The remaining three bits are ignored on the input and may be filled with 0s, 1s, a sign bit, or a programmed value on the output. The default format is 13bit 2's complement data, left justified, and clocked MSB first.

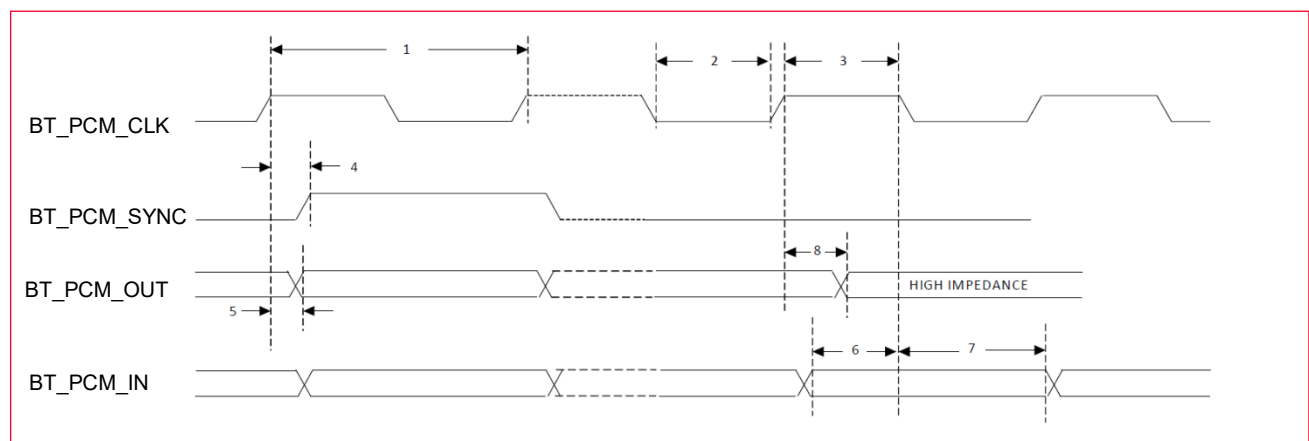

### 15.2.2 Wideband Speech Support

When the host encodes wideband speech (WBS) packets in transparent mode, the encoded packets are transferred over the PCM bus for an eSCO voice connection. In this mode, the PCM bus is typically configured in master mode for a 4 KHz sync rate with 16-bit samples, resulting in a 64-kbps bit rate. The IC also supports slave transparent mode using a proprietary rate-matching scheme. IN SBC-code mode, linear 16-bit data at 16 KHz (256 kbps rate) is transferred over the PCM bus.

### 15.2.3 Short Frame Sync - Master Mode

**Figure 11** shows the short frame sync signal in master mode.

**Figure 11: Short Frame Sync Signal - Master Mode**

**Table 15** describes the short frame sync signal parameters in master mode.

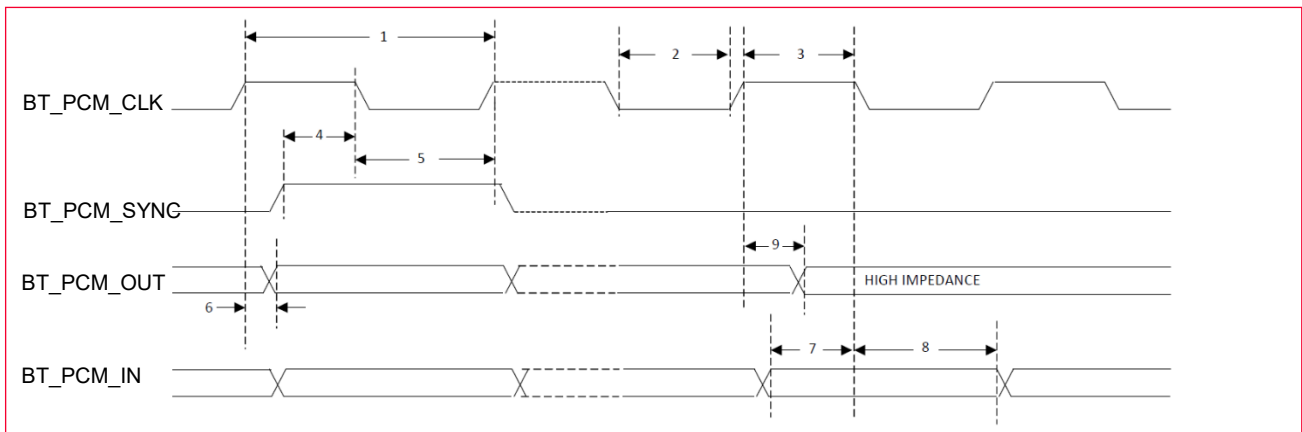

**Table 15: Short Frame Sync Signal Parameters - Master Mode**

Reference	Description	Minimum	Typical	Maximum	Unit
1	PCM bit clock frequency			12.0	MHz
2	PCM bit clock High	41.0			ns
3	PCM bit clock Low	41.0			ns
4	PCM_SYNC delay	0		25.0	ns
5	PCM_OUT delay	0		25.0	ns
6	PCM_IN setup	8.0			ns
7	PCM_IN hold	8.0			ns
8	Delay from rising edge of BT_PCM_CLK during last bit period to BT_PCM_OUT becoming high impedance.	0		25.0	ns

### 15.2.4 Short Frame Sync - Slave Mode

**Figure 12** shows the short frame sync signal in slave mode.

**Figure 12: Short Frame Sync Signal - Slave Mode**

**Table 16** describes the short frame sync signal parameters in slave mode.

## 15.3 Bluetooth I<sup>2</sup>S Interface Timing

The IC used in the module supports I<sup>2</sup>S format.

The I<sup>2</sup>S signals are:

- I<sup>2</sup>S clock: BT\_I2S\_CLK
- I<sup>2</sup>S Word Select: BT\_I2S\_WS
- I<sup>2</sup>S Data Out: BT\_I2S\_DO
- I<sup>2</sup>S Data In: BT\_I2S\_DI

BT\_I2S\_CLK and BT\_I2S\_WS become outputs in Master mode and inputs in Slave mode, whereas BT\_I2S\_DO always stays as an output. The channel word length is 16 bits, and the data is justified so that the MSB of the left-channel data is aligned with the MSB of the I<sup>2</sup>S bus, in accord with the I<sup>2</sup>S specification. The MSB of each data word is transmitted one bit clock cycle after the BT\_I2S\_WS transition, synchronous with the falling edge of the bit clock. Left-channel data is transmitted when BT\_I2S\_WS is LOW, and right channel data is transmitted when BT\_I2S\_WS is HIGH. Data bits sent by CYW5557x are synchronized with the falling edge of BT\_I2S\_CLK and should be sampled by the receiver on the rising edge of BT\_I2S\_CLK.

**Table 19** describes the timing for I<sup>2</sup>S transmitters and receivers.

**Table 19: Timing for I<sup>2</sup>S Transmitters and Receivers**

	Transmitter				Receiver				Notes
	Lower Limit		Upper Limit		Lower Limit		Upper Limit		
	Minimum	Maximum	Minimum	Maximum	Minimum	Maximum	Minimum	Maximum	
Clock Period T	T <sub>tr</sub>				T <sub>r</sub>				a
<b>Master Mode: Clock generated by transmitter or receiver</b>									
HIGH t <sub>HC</sub>	0.35T <sub>tr</sub>				0.35T <sub>tr</sub>				b
LOW t <sub>LC</sub>	0.35T <sub>tr</sub>				0.35T <sub>tr</sub>				b
<b>Slave Mode: Clock accepted by transmitter or receiver</b>									
HIGH t <sub>HC</sub>		0.35T <sub>tr</sub>				0.35T <sub>tr</sub>			c
LOW t <sub>LC</sub>		0.35T <sub>tr</sub>				0.35T <sub>tr</sub>			c
Rise Time t <sub>RC</sub>			0.15T <sub>tr</sub>						d
<b>Transmitter</b>									

	Transmitter				Receiver				Notes
	Lower Limit		Upper Limit		Lower Limit		Upper Limit		
	Minimum	Maximum	Minimum	Maximum	Minimum	Maximum	Minimum	Maximum	
Delay $t_{dtr}$				0.8T					e
Hold time $t_{htr}$	0								d
<b>Receiver</b>									
Setup time $t_{sr}$					0.2T <sub>r</sub>				f
Hold time $t_{hr}$					0.2T <sub>r</sub>				f

The notes column is described below:

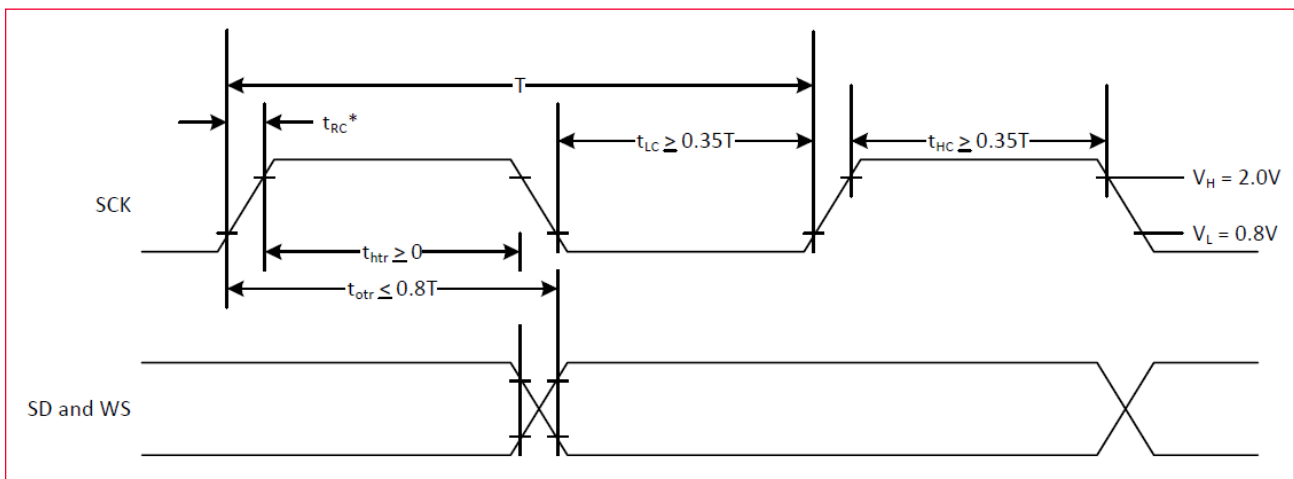

- a) The system clock period T must be greater than T<sub>tr</sub> and T<sub>r</sub> because both the transmitter and receiver have to be able to handle the data transfer rate.
- b) At all data rates in master mode, the transmitter or receiver generates a clock signal with a fixed mark/space ratio. For this reason, t<sub>HC</sub> and t<sub>LC</sub> specified with respect to T.
- c) In slave mode, the transmitter and receiver need a clock signal with minimum HIGH and LOW periods so that they can detect the signal. So long as the minimum periods are greater than 0.35T<sub>tr</sub> any clock that meets the requirements can be used.
- d) Because the delay(t<sub>dtr</sub>) and the maximum transmitter speed (defined by T<sub>tr</sub>) are related, a fast transmitter driven by a slow clock edge can result in t<sub>dtr</sub> not exceeding t<sub>RC</sub> which means t<sub>htr</sub> becomes zero or negative. Therefore, the transmitter has guarantee that t<sub>htr</sub> is greater than or equal to zero, so long as the clock rise-time t<sub>RC</sub> is not more than t<sub>RC</sub> where t<sub>RCmax</sub> is not less than 0.15T<sub>tr</sub>.
- e) To allow data to be clocked out on a falling edge, the delay is specified with respect to the rising edge of the clock signal and T, always giving the receiver sufficient setup time.
- f) The data setup and hold time must not be less than the specified receiver setup and hold time.

The time periods specified in the figures below are defined by the transmitter speed. The receiver specifications must match transmitter performance.

Figure 15 shows the I<sup>2</sup>S transmitter timing signal.

## 18 Tape And Reel Packing

This section describes the tape and reel packing, i.e., the dimensions of the plastic tape, reel and taping diagrams.

### 18.1 Dimensions of Tape (Plastic Tape)

Figure 28 shows the dimensions of the plastic tape.

Figure 28: Dimensions of Tape (Unit: mm)

## 18.2 Dimensions of Reel

Figure 29 shows the dimensions of reel.

Figure 29: Dimensions of Reel (Unit: mm)

## 18.3 Taping Diagrams

Figure 30 shows the taping diagrams.

Figure 30: Taping Diagrams

Table 79 describes the taping specifications.

Table 79: Taping Specifications

Mark	Description
1	Feeding Hole: As specified in <a href="#">Dimensions of Tape (Plastic Tape)</a> ☐☒
2	Hole for chip: As specified in <a href="#">Dimensions of Tape (Plastic Tape)</a> ☐☒
3	Cover tape: 62 μm in thickness
4	Base tape: As specified in <a href="#">Dimensions of Tape (Plastic Tape)</a> ☐☒

## 18.4 Leader and Tail Tape

Figure 31 shows the leader and tail tape.

Figure 31: Leader and Tail Tape

- The tape for chips is wound clockwise, the feeding holes to the right side as the tape is pulled toward the user.
- The cover tape and base tape are not adhered at no components area for 250 mm minimum.
- Tear off strength against pulling of cover tape: 5 N minimum.
- Packaging unit: 1000 pcs/reel
- Material
  - Base tape: Plastic
  - Reel: Plastic
- Cover tape, cavity tape and reel are made the anti-static processing.
- Peeling of force: 1.1 N maximum in the direction of peeling as shown below.

Figure 32 shows the peeling off force.

Figure 32: Peeling Off Force

## 18.5 Humidity Proof Packaging

Figure 33 shows the humidity proof packaging.

Figure 33: Humidity Proof Packaging

Tape and reel must be sealed with the anti-humidity plastic bag. The bag contains the desiccant and the humidity indicator.

## 19 Notice

### 19.1 Storage Conditions

Please use this product within 6 months after receipt.

- The product *must be* stored without opening the packing under the ambient temperature from 5 to 35 °C and humidity from 20 ~ 70 %RH.

Packing materials, in particular, may be deformed at the temperature over 40 °C

- The solderability of the product left idle for more than 6 months after receipt needs to be confirmed before it is used.
- The product *must be* stored in noncorrosive gas (Cl<sub>2</sub>, NH<sub>3</sub>, SO<sub>2</sub>, NO<sub>x</sub>, etc.).
- Any excess mechanical shock including, but not limited to, sticking the packing materials by sharp object, and dropping the product, *must not be* applied as that will damage the packing materials.

This product is applicable to MSL3 (Based on JEDEC Standard J-STD-020)

- After the packing is opened, the product *must be* stored at <30 °C / <60 %RH and the product *should be* used within 168 hours after opening.
- When the color of the indicator in the packing is changed, the product *should be* baked before soldering.
- **Baking condition:** 125 +5/-0 °C, 24 hours, 1 time

The products must be baked on the heat-resistant tray because the material (Base Tape, Reel Tape and Cover Tape) is not heat-resistant.

### 19.2 Handling Conditions

Be careful while handling or transporting products because excessive stress or mechanical shock may break the products.

Handle with care if you suspect that products may have cracks or damages on their terminals. If there is any such damage, the characteristics of products may change. *Do not touch* products with bare hands as that may cause poor solderability and cause damage by static electrical charge.

### 19.3 Standard PCB Design (Land Pattern and Dimensions)

All the ground terminals should be connected to the ground patterns. Furthermore, the ground pattern should be provided between IN and OUT terminals. Please refer to the specifications for the standard land dimensions.

The recommended land pattern and dimensions should be as per Murata's standard. The characteristics of products may vary depending on the pattern drawing method, grounding method, land dimensions, land forming method of the NC terminals and the PCB material and thickness. Therefore, be sure to verify the characteristics in the actual set.

When using non-standard lands, contact Murata in advance.

## 19.4 Notice for Chip Placer

When placing products on the PCB, products may be stressed and broken by uneven forces from a worn-out chucking locating claw or a suction nozzle. To prevent products from damages, be sure to follow the specifications for the maintenance of the chip placer being used. For the positioning of products on the PCB, be aware that mechanical chucking may damage products.

## 19.5 Soldering Conditions

The recommendation conditions of soldering are as in **Figure 34**.

Soldering must be carried out by the above-mentioned conditions to prevent products damage. Set up the highest temperature of reflow within 260 °C. Contact Murata before use concerning other soldering conditions.

**Figure 34: Reflow Soldering Standard Conditions (Example)**

Please use the reflow within 2 times.

Use rosin type flux or weakly active flux with a chlorine content of 0.2 wt. % or less.

## 19.6 Cleaning

Since this Product is Moisture Sensitive, cleaning is not recommended. If any cleaning process is done the customer is responsible for any issues or failures caused such process.

## 19.7 Operational Environment Conditions

Murata products are designed to work for electronic products under normal environmental conditions (ambient temperature, humidity, and pressure). Therefore, there is no problem in using the products under the above-mentioned conditions. However, using the products under the following circumstances may damage products and cause electricity leakage and abnormal temperature may occur:

- In atmosphere containing corrosive gas (Cl<sub>2</sub>, NH<sub>3</sub>, SO<sub>x</sub>, NO<sub>x</sub> etc.).
- In atmosphere containing combustible and volatile gases.
- Dusty place.
- Direct sunlight place.
- Water splashing place.
- Humid place where water condenses.
- Freezing place.

If there is any chance of using the products under the conditions listed above, consult with Murata before actual use.

Do not apply static electricity or excessive voltage while assembling and measuring the products, as it might be a cause of degradation or destruction to apply static electricity to products.

## 19.8 Input Power Capacity

Products shall be used in the input power capacity as specified in this specification.

Inform Murata beforehand, in case that the components are used beyond such input power capacity range.

## 20 Precondition to Use Our Products

PLEASE READ THIS NOTICE BEFORE USING OUR PRODUCTS.

Please make sure that your product has been evaluated and confirmed from the aspect of the fitness for the specifications of our product when our product is mounted to your product.

All the items and parameters in this product specification/datasheet/catalog have been prescribed on the premise that our product is used for the purpose, under the condition and in the environment specified in this specification. You are requested not to use our product deviating from the condition and the environment specified in this specification.

Please note that the only warranty that we provide regarding the products is its conformance to the specifications provided herein. Accordingly, we shall not be responsible for any defects in products or equipment incorporating such products, which are caused under the conditions other than those specified in this specification.

WE HEREBY DISCLAIM ALL OTHER WARRANTIES REGARDING THE PRODUCTS, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION ANY WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE, THAT THEY ARE DEFECT-FREE, OR AGAINST INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS.

You agree that you will use any and all software or program code (including but not limited to firmware, and radio configuration files) we may provide or to be embedded into our product ("Software") provided that you use the Software bundled with our product. YOU AGREE THAT THE SOFTWARE SHALL BE PROVIDED TO YOU "AS IS" BASIS, MURATA MAKES NO REPRESENTATIONS OR WARRANTIES THAT THE SOFTWARE IS ERROR-FREE OR WILL OPERATE WITHOUT INTERRUPTION. AND MORE, MURATA MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED WITH RESPECT TO THE SOFTWARE. MURATA EXPRESSLY DISCLAIM ANY AND ALL WARRANTIES OR CONDITIONS OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE NOR THE WARRANTY OF TITLE OR NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS.

You shall indemnify and hold harmless us, our affiliates, and our licensor from and against any and all claims, costs, expenses and liabilities (including attorney's fees), which arise in connection with the using the Software.

The product shall not be used in any application listed below which requires especially high reliability for the prevention of such defect as may directly cause damage to the third party's life, body or property. You acknowledge and agree that, if you use our products in such applications, we will not be responsible for any failure to meet such requirements. Furthermore, YOU AGREE TO INDEMNIFY AND DEFEND US AND OUR AFFILIATES AGAINST ALL CLAIMS, DAMAGES, COSTS, AND EXPENSES THAT MAY BE INCURRED, INCLUDING WITHOUT LIMITATION, ATTORNEY FEES AND COSTS, DUE TO THE USE OF OUR PRODUCTS AND THE SOFTWARE IN SUCH APPLICATIONS.

- Aircraft equipment.
- Aerospace equipment.
- Undersea equipment.
- Power plant control equipment.
- Medical equipment.
- Traffic signal equipment.

- Burning / explosion control equipment.
- Disaster prevention / crime prevention equipment.
- Transportation equipment (vehicles, trains, ships, elevator, etc.).
- Application of similar complexity and/ or reliability requirements to the applications listed in the above.
- We expressly prohibit you from analyzing, breaking, reverse-engineering, remodeling altering, and reproducing our product. Our product cannot be used for the product which is prohibited from being manufactured, used, and sold by the regulations and laws in the world.

Even in the unlikely event that an abnormality or malfunction occurs in this product under operating conditions that conform to the specifications, be sure to add an appropriate fail-safe function to the system to prevent secondary accidents.

We do not warrant or represent that any license, either express or implied, is granted under any our patent right, copyright, mask work right, or our other intellectual property right relating to any combination, machine, or process in which our products or services are used. Information provided by us regarding third-party products or services does not constitute a license from us to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from us under our patents or other intellectual property.

Please do not use our products, our technical information and other data provided by us for the purpose of developing of mass-destruction weapons and the purpose of military use.

Moreover, you must comply with "foreign exchange and foreign trade law", the "U.S. export administration regulations", etc.

Please note that we may discontinue the manufacture of our products, due to reasons such as end of supply of materials and/or components from our suppliers.

By signing on specification sheet or approval sheet, you acknowledge that you are the legal representative for your company and that you understand and accept the validity of the contents herein. When you are not able to return the signed version of specification sheet or approval sheet within 30 days from receiving date of specification sheet or approval sheet, it shall be deemed to be your consent on the content of specification sheet or approval sheet. Customer acknowledges that engineering samples may deviate from specifications and may contain defects due to their development status. We reject any liability or product warranty for engineering samples. In particular we disclaim liability for damages caused by

- The use of the engineering sample other than for evaluation purposes, particularly the installation or integration in the product to be sold by you,
- Deviation or lapse in function of engineering sample,
- Improper use of engineering samples.
- We disclaim any liability for consequential and incidental damages.

This Precondition to Use Our Products stipulated in this datasheet can only be modified, amended or altered by documents that explicitly reflect the mutual consent of both parties (including instances where one party explicitly indicates its acceptance of terms provided by the other party through click-through agreements).

If you can't agree with the above contents, please contact sales.
